Responsive Interactions and Instruction in Prekindergarten through 3rd Grade: Building a Strong Foundation for the Common Core Learning Standards

The NYS Early Childhood Advisory Council, NYS Head Start Collaboration Office, and the NYS Association for the Education of Young Children are working to support our youngest students, their families, teachers, and leaders by highlighting key features of high quality early childhood teaching. **We firmly believe that young students can best meet Common Core Learning Standards when they have effective teachers who use intentional, experiential, and developmentally and culturally appropriate practices.** This brief provides helpful strategies related to setting up a classroom environment that will help to put the State’s young learners on a path to social and intellectual success as they master the foundational skills to meet the New York Common Core Learning Standards.

To learn more and view the other briefs in this series that address leadership, curriculum, the classroom environment, and assessment, please visit The New York ECAC website at www.nysecac.org or contact Patty Persell at Patricia.persell@ccf.ny.gov
Beginning at birth, children learn about themselves and their worlds through their relationships with their families, caregivers, and teachers. When those relationships are sensitive to young children’s development and maturation, they put children on the path to lifelong success.

An effective relationship starts with the establishment of trust and an understating of child development. As children develop from birth through the 3rd grade, they move from concrete to abstract and symbolic thinking. At the same time, with thoughtful instruction and practice they gain the ability to regulate their emotions, collaborate with their peers, and understand others’ perspectives. Shifts in cognition manifest in all aspects of young children’s development, which are deeply interrelated. Indeed, during a child’s first eight years “emotional, social, physical, and thinking abilities are intertwined like a multi-fibred weaving. Each strand forms an essential part of the whole.”1

As children grow, a complex combination of experiences, environment, and family characteristics shape children’s learning and development. Appropriate experience at the right stage of development determines the strength of the brain’s architecture, which, in turn, determines how well he or she will think and regulate emotions.2 Positive early development lays the foundation for the full spectrum of skills, attitudes, and knowledge required to succeed in college and beyond. While deprivation undermines development, nurturing and stimulating early learning experiences help our young children thrive.

Because children learn best when they have rich interactions, early childhood teachers and caregivers have a responsibility to build nurturing and stable relationships with each child in their care. To do so, they must have and model empathy, respect, and caring throughout their daily activities. When those strong relationships are established, children will learn when teachers present them with new ideas and abilities that are just beyond their current knowledge base and when they have many hands-on opportunities to practice their new skills. These learning opportunities occur naturally during playful learning in an early childhood education setting and project-based learning in the elementary grades. The learning process is the same — child-driven hands-on opportunities to work with peers as they solve problems, test their ideas, invent, create, and grow.

In light of the way that young children learn, a comprehensive approach to early childhood and elementary instruction is intentional, responsive, and builds on children’s backgrounds and interests. In fact, a substantial body of evidence shows that teacher-directed didactic instruction actually limits children’s learning, creativity, and curiosity. Further, when young children do not engage in dramatic play at school, behavioral challenges and expulsions increase.3 A high-quality early learning environment strikes a balance between child-initiated play in the presence of engaged teachers and focused experiential learning guided by teachers, depicted by the orange area in Figure 1 (below).

Interactions and instruction include the strategies teachers or caregivers use to engage young learners as they scaffold new knowledge and skills. Teachers build relationships with each student through responsive interactions. When teachers speak in a warm tone and treat every student with respect, they establish a safe and stimulating environment in which children can explore new ideas and abilities. Instruction transpires when teachers approach children as active participants in their learning. They have rich conversations with their students to extend their thinking and present increasingly challenging tasks across all developmental domains. These interactions take place in large group settings, such as a morning meeting or when the teacher facilitates a group discussion about a topic they are investigating. In a high-quality classroom, most instruction occurs in learning centers. Indeed, teachers use small group interactions to differentiate instruction and conduct authentic assessments of children’s progress. With the support of a teacher who listens to the children, asks questions, and adds information, the children deepen their understanding of key concepts. As teachers scaffold children’s learning, they rely on a variety of instructional techniques, including encouragement, giving specific

The orange section depicts the “sweet spot” for maximum learning, trust and discovery.
High Quality Interactions and Instruction in Action

In a high-quality kindergarten class, the teacher uses responsive interactions and comprehensive instructional strategies to create a caring learning community so that her students come to school eager to learn. The teacher begins the day with a morning meeting to help cultivate positive relationships among the students and affirm the culture of the classroom. The children greet one another at the beginning of the meeting and the children have a chance to participate in the group discussion, then the teacher introduces new content knowledge and the plan for the day. Then, the children have time to engage in child-initiated choice time in learning centers. The teacher scans the classroom to observe how her students are working together and to ensure they are engaged in appropriate activities. She sees one child who appears tired and is wandering from one center to the next without becoming actively involved. The teacher approaches the child to see how she is feeling. The teacher has a strong and trusting relationship with her student and the student shares that she had a difficult morning. First the teacher sits with the child and listens and then when the child seems ready she encourages the child to go to the reading center where she can sit comfortably and listen to a book on tape with her classmates. The books that the children can choose highlights key literacy constructs the children are developing, such as rhyming. The book also relates to the content they are exploring, such as their community. When the book is finished, the teacher returns to the reading center to engage the students in a discussion about the book and to check in with the child to see that she is feeling more comfortable and engaged. She also encourages the children to explain their opinions based on the story line as well as their personal experiences.

Interactions and Instruction address the Common Core Learning Standards

The Common Core Learning Standards promote college and career readiness by describing the knowledge and skills in math, reading, writing, speaking, listening, and language that students should gain as they advance through the grades. To foster a cohesive approach to instruction in prekindergarten through elementary school, the State Education Department developed the Prekindergarten Foundation for the Common Core. This tool addresses five essential early learning domains: approaches to learning, language and literacy, cognition and general knowledge, social and emotional development, and physical health. Like developmentally appropriate practice, the Common Core Learning Standards support interdisciplinary learning, higher order thinking, creativity, and the use of language and literacy skills throughout the day. As students master the standards, they gain seven essential capacities that promote their intellectual development. A high-quality approach to interactions and instruction support each capacity.
<table>
<thead>
<tr>
<th>Common Core Essential Capacities</th>
<th>Characteristics of High Quality Interactions and Instruction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Demonstrate independence</td>
<td>Provides students with ample opportunity to pursue their interests independently and collaborate with their peers. Teachers respect children’s choices during child-initiated learning, which builds students’ intrinsic motivation, self-regulation, and independence. Teachers positively acknowledge children’s independence and initiative.</td>
</tr>
<tr>
<td>Build strong content knowledge</td>
<td>Builds on children’s interests and experiences during their interactions. Teachers ask open-ended questions to understand students’ knowledge, respond to children’s questions, and add additional information that spans subject areas to build a comprehensive knowledge base.</td>
</tr>
<tr>
<td>Respond to varying demands of audience, task, purpose, and discipline</td>
<td>Includes rich discussion throughout the day. Teachers model communication strategies and help students to express themselves appropriately with their peers. Young learners’ communication skills flourish when they have responsive relationships with their teachers.</td>
</tr>
<tr>
<td>Comprehend as well as critique</td>
<td>Promotes curiosity and critical thinking when teachers ask open-ended questions and follow-up questions. Teachers encourage students to ask questions of one another during small group work.</td>
</tr>
<tr>
<td>Value evidence</td>
<td>Provides opportunities for students to explain their opinions and statements when they interact with one another in whole group, small group, and individual conversations. They ask children to find evidence in a text to support their thinking, for example, “How do you know Goldilocks was scared? What did she do or say that showed you how she felt?” They encourage children to plan and review their work and to represent what they know in several ways (e.g., verbally and pictorially).</td>
</tr>
<tr>
<td>Use technology and digital media strategically and capably</td>
<td>Digital media is used sparingly because young students learn best through interacting with their peers and their teachers and through hands-on learning.</td>
</tr>
<tr>
<td>Understand other perspectives and cultures</td>
<td>Recognizes that students’ family backgrounds play a significant role in how they approach learning. When teachers interact with young learners, they learn about a child’s family to help the child establish a strong sense of self and they learn to value the strengths of every child’s family. Teachers’ interactions demonstrate and model acceptance, appreciation, and value of diversity.</td>
</tr>
</tbody>
</table>

**Strategies For Teachers**

- Speak with young students in a warm, caring, and encouraging tone
- Listen to children and encourage them to respectfully listen to one another
- Structure the day so that the majority of time is spent in one-on-one and small group interactions with students
- Use a variety of techniques that are responsive to young students’ learning styles, experience, and culture, including encouragement, giving specific feedback, modeling, adding a challenge, offering clues, providing information, and giving directions.

**Strategies For Leaders**

- Hire teachers with expertise in early and cultural and linguistic competence to teach in prekindergarten to 3rd grade
- Select curricula that foster rich discussion and interactions among teachers and students
- Provide professional development that encourages responsive and appropriate interactions
- Ensure teachers have sufficient time to engage in elaborated authentic interactions with students by limiting class sizes and providing adequate staff support
